Pitch

The Netatmo Personal Weather Station helps you master your own climate measurements on your smartphone.

Measure accurately your home outdoor and indoor temperatures, relative humidity, sound level, barometric pressure and air quality. Access your live measurements, historic data and graphs on your smartphone, tablet or computer.

Extend the reach of Netatmo Personal Weather Station with the Rain Gauge to measure rainfall, the Wind Gauge to know wind speed and direction, and the Additional Indoor Modules to monitor indoor climate in specific rooms.

Join the world's largest collaborative weather station network:
the Netatmo Weathermap which gathers all Netatmo Personal Stations worldwide.

The Netatmo Personal Weather Station is Amazon Alexa compatible.

3 reasons to buy the Personal Weather Station

ULTRA-LOCAL WEATHER DATA
Measure your own outdoor and indoor climate data: temperature, humidity, barometric pressure, indoor sound and indoor CO_2 level.

WEATHER RECORDS
Check in the App your real-time data and historical graphs to understand weather trends.

HOME AUTOMATION
Use your Netatmo Personal Weather Station measurements to create scenarios with your favorite Smart Home platform and improve your home comfort.
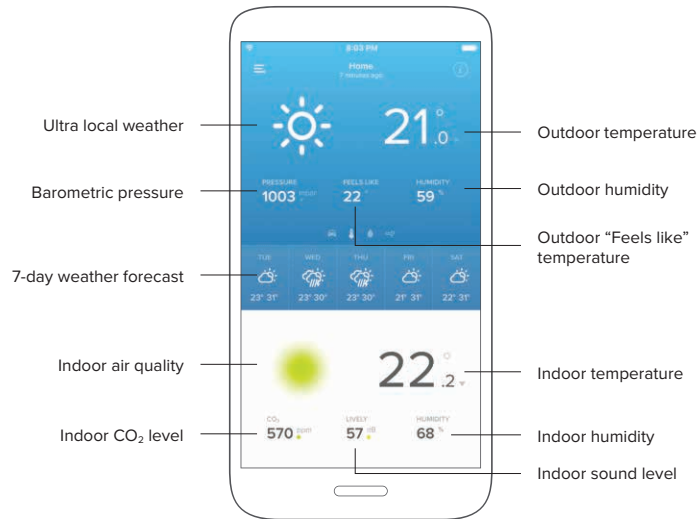

Streamlined design, instinctively ergonomic

Press the top of the Personal Weather Station's Indoor Module to view indoor CO_2 levels via its light indicator.

The Personal Weather Station's elegant design fits easily and discreetly into any home.

The Outdoor Module's solid one-piece aluminum body is completely weatherproof.

Complete your Netatmo Personal Weather Station

RAIN GAUGE

Measure and record real-time and accumulative precipitation data. Know when you need to water your plants.

This accessory only works with the Netatmo Personal Weather Station, sold separately. You can add up 1 Rain Gauge per Netatmo Personal Weather Station.

Complete your Netatmo Personal Weather Station

WIND GAUGE

Use the latest ultrasound technology to accurately measure the wind's speed and direction. Choose the best time for outdoor sports activities.

This accessory only works with the Netatmo Personal Weather Station, sold separately. You can add up 1 Wind Gauge per Netatmo Personal Weather Station.

ADDITIONAL INDOOR MODULE

Place the Additional Module in the room of your choice to monitor the temperature, humidity and CO_2 level. Add up to 3 to your Personal Weather Station and monitor better your home.

This accessory only works with the Netatmo Personal Weather Station, sold separately. You can add up to 3 Additional Modules to your Netatmo Personal Weather Station.

Understand your outdoor environment

PRECISE MEASUREMENTS TO UNDERSTAND YOUR ULTRA-LOCAL WEATHER

Get precise measurements from your Personal Weather Station sensors. Know in real-time about the outdoor temperature, humidity and barometric pressure. Check the 7-day weather forecast and the outdoor pollution.

They work with us

These famous weather companies consider our network's data so reliable they use it as a knowledge source to build their weather forecasts.

Plan your outdoor activities

REAL-TIME CLIMATE DATA

Use your real-time weather data to choose the right outfit to practice outdoor sports depending on the local climate.
Know exactly if the wind is strong enough or if it rained a few hours ago and practice your favorite sports in the best conditions.

Understand your garden's needs

SET UP CUSTOMIZED ALERTS

Set up weather alerts to receive notifications on what matters to you. For instance you can set up an alert when the temperature in your garden gets below 5°C / 41°F and it's time to protect your plants.

They work with us

These smart sprinklers easily connect to your Netatmo Personal Weather Station and Rain Gauge so that your garden automatically receives the amount of water it needs just when it needs it.

Measure your indoor comfort

LIVE HOME MONITORING

Receive live accurate measurements of your home indoor temperature, humidity, sound and CO_2 level. CO_2 reading is the most reliable confinement indicator: high level of CO_2 means that all the pollutants in the air are in high concentration. Be alerted when it's time to ventilate the room.

Press the top of the Indoor Module and check the light indicator to see direct indoor CO_2 reading.
